SUMMARY

QA Automation Engineer with 5 years of experience delivering scalable UI and API automation solutions using **Selenium WebDriver, Java, TestNG, Cucumber BDD**, and **REST Assured**. Proven track record of automating **500+ test cases**, reducing regression execution time by **30%**, and integrating automation into **Jenkins CI/CD pipelines**. Experienced in leveraging **AI-powered development tools** including ChatGPT, Claude, GitHub Copilot, and Agentic AI workflows to accelerate test automation development, optimize debugging, generate test cases, and improve engineering productivity.

TECHNICAL SKILLS

- **Automation Tools:** Selenium WebDriver, Selenium Grid, TestNG, JUnit, Cucumber (BDD), SelectorsHub.
- **Programming & Scripting:** Core Java, TypeScript
- **API Testing:** REST Assured, Postman, Swagger & cURL, OAuth 2.0, Bearer Authentication, JSON Schema Validation, CRUD Operations, SOAPUI, GraphQL, API Contract Testing
- **AI-Assisted Development & Testing:** GitHub Copilot, Agentic AI, Prompt Engineering, AI-assisted Test Case Generation, AI-assisted Code Review, AI-assisted Debugging, AI-assisted Test Data Generation, AI-assisted API Test Design
- **Framework Design:** Hybrid Automation Framework, Page Object Model (POM), Data-Driven Framework, BDD Framework.
- **Database:** SQL, MySQL
- **CI/CD & Version Control:** Jenkins (CI Integration), Git, GitHub, Maven
- **Test & Defect Management:** JIRA, WorkFront
- **Supporting Tools:** Apache POI (Excel Handling), Docker (Basic), Extent Reports, Log4j.

CERTIFICATIONS

- Learn Selenium with Java, Cucumber & Frameworks — Basic to Advanced @Udemy
- Learn API Testing using Postman & SoupUI @Udemy
- Learn API Testing using Rest Assured & GraphQL @Udemy

PROFESSIONAL EXPERIENCE

QA Test Engineer | Project: EXXON MOBIL Corporation Nov 2023 – Present

Accenture Solutions Pvt Ltd.

- Automated **500+ UI and API regression test cases** using Selenium WebDriver, Java, TestNG, Cucumber BDD, and REST Assured, reducing manual testing effort by **60%** and accelerating release cycles.
- Improved regression execution time by **30%** through parallel execution, reusable automation components, and optimized test suite design.
- Leveraged **ChatGPT, Claude AI, and GitHub Copilot** to accelerate Selenium and REST Assured script development, generate reusable automation components, and improve overall engineering productivity.
- Utilized **Agentic AI workflows** to assist with automation script generation, **XPath creation, API payload design, SQL query generation**, and **framework documentation**, reducing manual development effort.

- Applied **Generative AI** to create comprehensive test cases, edge-case scenarios, negative test data, and API validation logic, improving automation coverage and testing efficiency.
- Enhanced a scalable **Hybrid Automation Framework** using Page Object Model (POM), Cucumber BDD, Apache POI, and TestNG, increasing code reusability and simplifying framework maintenance.
- Developed comprehensive **REST API automation suites** covering CRUD operations, OAuth 2.0 authentication, Bearer Token validation, JSON Schema validation, response assertions, and negative testing, strengthening API reliability.
- Built **end-to-end automation** workflows by integrating **UI and API validations**, enabling earlier detection of integration issues and reducing production defects.
- Automated multilingual and environment-specific validations using Apache POI, improving test coverage across global deployments while minimizing repetitive manual effort.
- Executed **cross-browser automation** across Chrome, Firefox, and Edge using **Selenium Grid**, ensuring consistent application behavior across supported browsers.
- Integrated **UI and API automation suites** into **Jenkins CI/CD** pipelines, enabling continuous testing and faster feedback for every deployment.
- Improved release visibility by generating automated execution reports through **Extent Reports** and Jenkins dashboards, supporting informed release decisions.
- Identified and reported critical functional, UI, and API defects through **JIRA** and **WorkFront**, contributing to improved release stability.
- Collaborated with Developers, Business Analysts, Product Owners, and QA teams to perform defect triage, API contract validation, **sprint planning**, and **root cause analysis**.
- Performed comprehensive **Smoke, Sanity, Regression, Integration**, and **End-to-End Testing**, contributing to stable, high-quality production releases.

QA Test Engineer | Project: Pharmaceutical Digital Marketing & Web Applications

Aug 2022 – Nov 2023

Accenture, India

- Delivered end-to-end quality assurance for **pharmaceutical digital marketing applications**, ensuring regulatory compliance, localization accuracy, and high-quality customer experiences.
- Designed and executed **400+ functional, regression, smoke, and sanity test cases**, improving release quality across multiple production deployments.
- Validated **250+ multilingual email templates** across Outlook, Gmail, and mobile clients, ensuring consistent rendering and compliance with pharmaceutical regulations.
- Performed **REST API** testing using **Postman**, validating request and response payloads, authentication mechanisms, status codes, and error handling for business-critical services.
- Evaluated API performance using Postman Collection Runner, helping identify response-time issues before production deployment.
- Verified backend data integrity through SQL queries, ensuring consistency between database records, API responses, and user interface content.
- Executed responsive and **cross-browser testing** across Chrome, Firefox, Edge, Safari, and mobile devices, improving application compatibility and user experience.
- Collaborated with cross-functional teams to analyze business requirements, resolve defects, and deliver high-quality software within Agile sprint timelines.
- Supported **User Acceptance Testing (UAT)**, release validation, and production deployment activities, ensuring successful delivery of multiple global releases.
- Managed **defect lifecycle** using **JIRA** improving issue tracking, prioritization, and resolution efficiency.

Quality Associate | Client: Xerox Corporation

Jul 2021 – Aug 2022

HCLTech, India

- Executed **end-to-end** functional, regression, smoke, integration, and usability testing for enterprise printing software supporting weekly Agile release cycles.
- Authored detailed test plans, test cases, execution reports, and defect documentation, improving test coverage and traceability.
- Validated printing workflows, hardware-software interactions, device configurations, and UI functionality across multiple enterprise printer models.
- Identified, documented, and verified software defects using **JIRA**, working closely with development teams to ensure

timely resolution and improved product quality.

- Performed **Build Verification Testing (BVT)** and Release Validation activities to ensure production readiness and stable software deployments.
- Supported QA documentation and knowledge-sharing initiatives, improving onboarding and maintaining consistent testing practices across the team.

EDUCATION

Bachelor of Computer Applications (BCA)

2017 - 2020

Guru Nanak College, Chennai, Tamil Nadu, India.

PROJECT

Smart Tool

- Designed and developed a custom Java-based automation utility to extract webpage metadata, component IDs, hyperlinks, and content attributes.
- Automated metadata validation across large-scale CMS pages, reducing manual validation effort by approximately **70%**.
- Enhanced the Smart Tool by utilizing **Generative AI** to generate validation logic, optimize metadata extraction workflows, and automate documentation, improving development speed and reducing repetitive engineering tasks.
- Built reusable validation modules to identify broken links, missing IDs, duplicate components, and inconsistent webpage configurations.
- Improved content validation accuracy while significantly reducing human errors during release verification.
- Enabled faster release cycles by providing automated content verification reports to QA and Content teams.
